

Know what's about to slip — *while you can still stop it.*

Software Engineering Intelligence for regulated
engineering organisations.

Inside your perimeter.

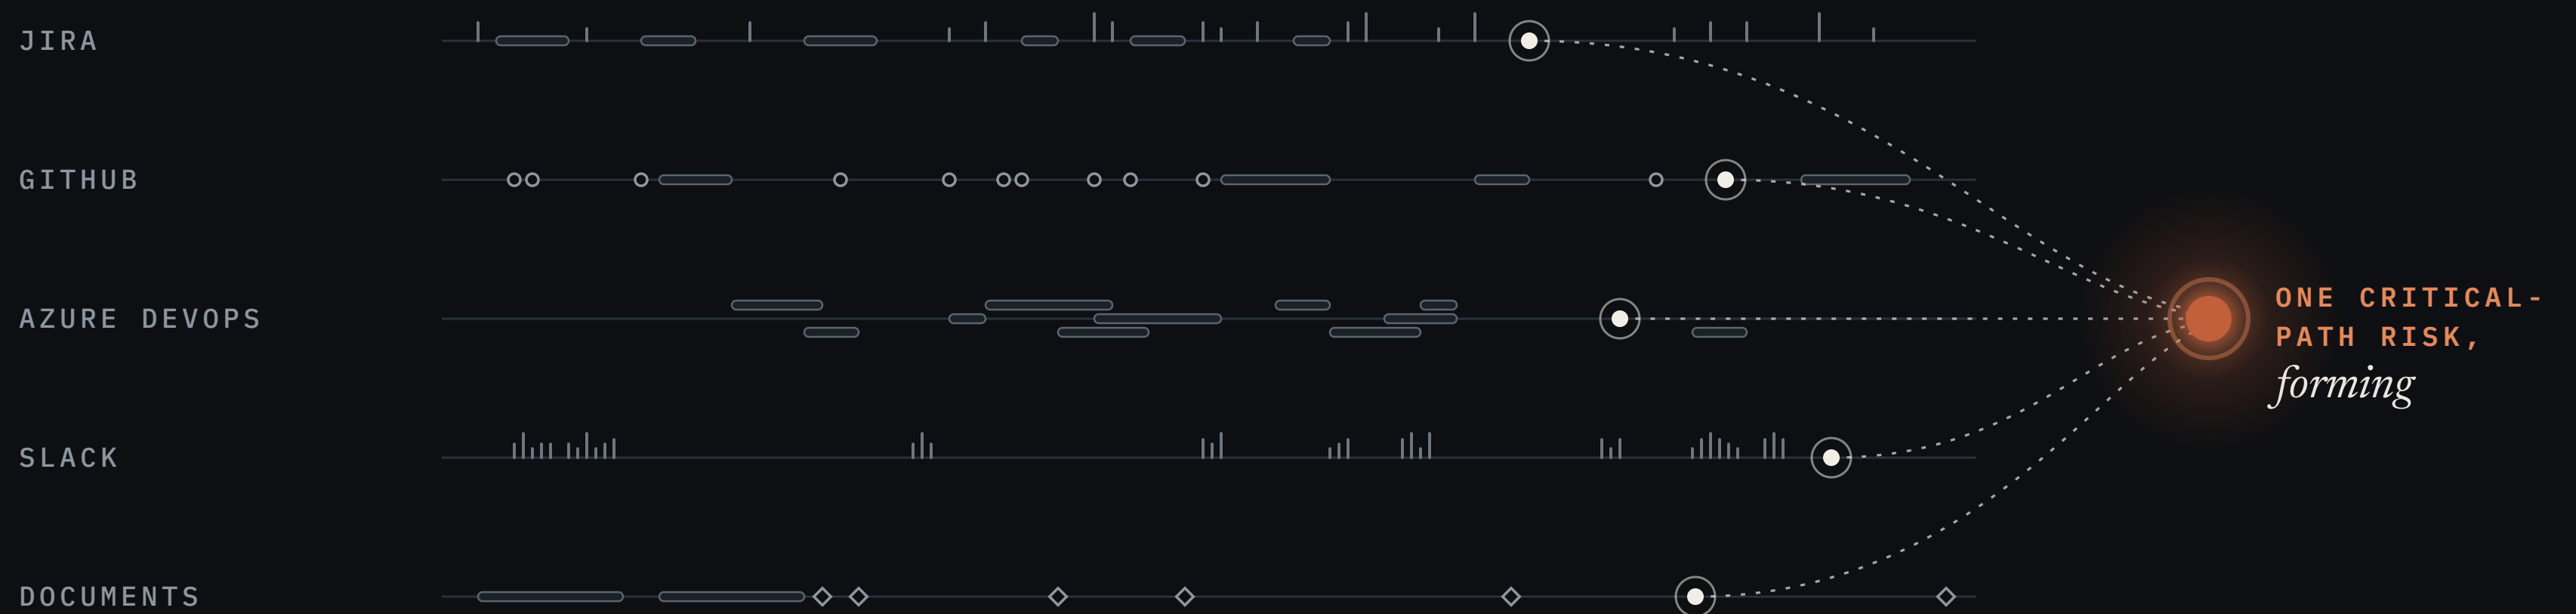

Every delay has two dates.

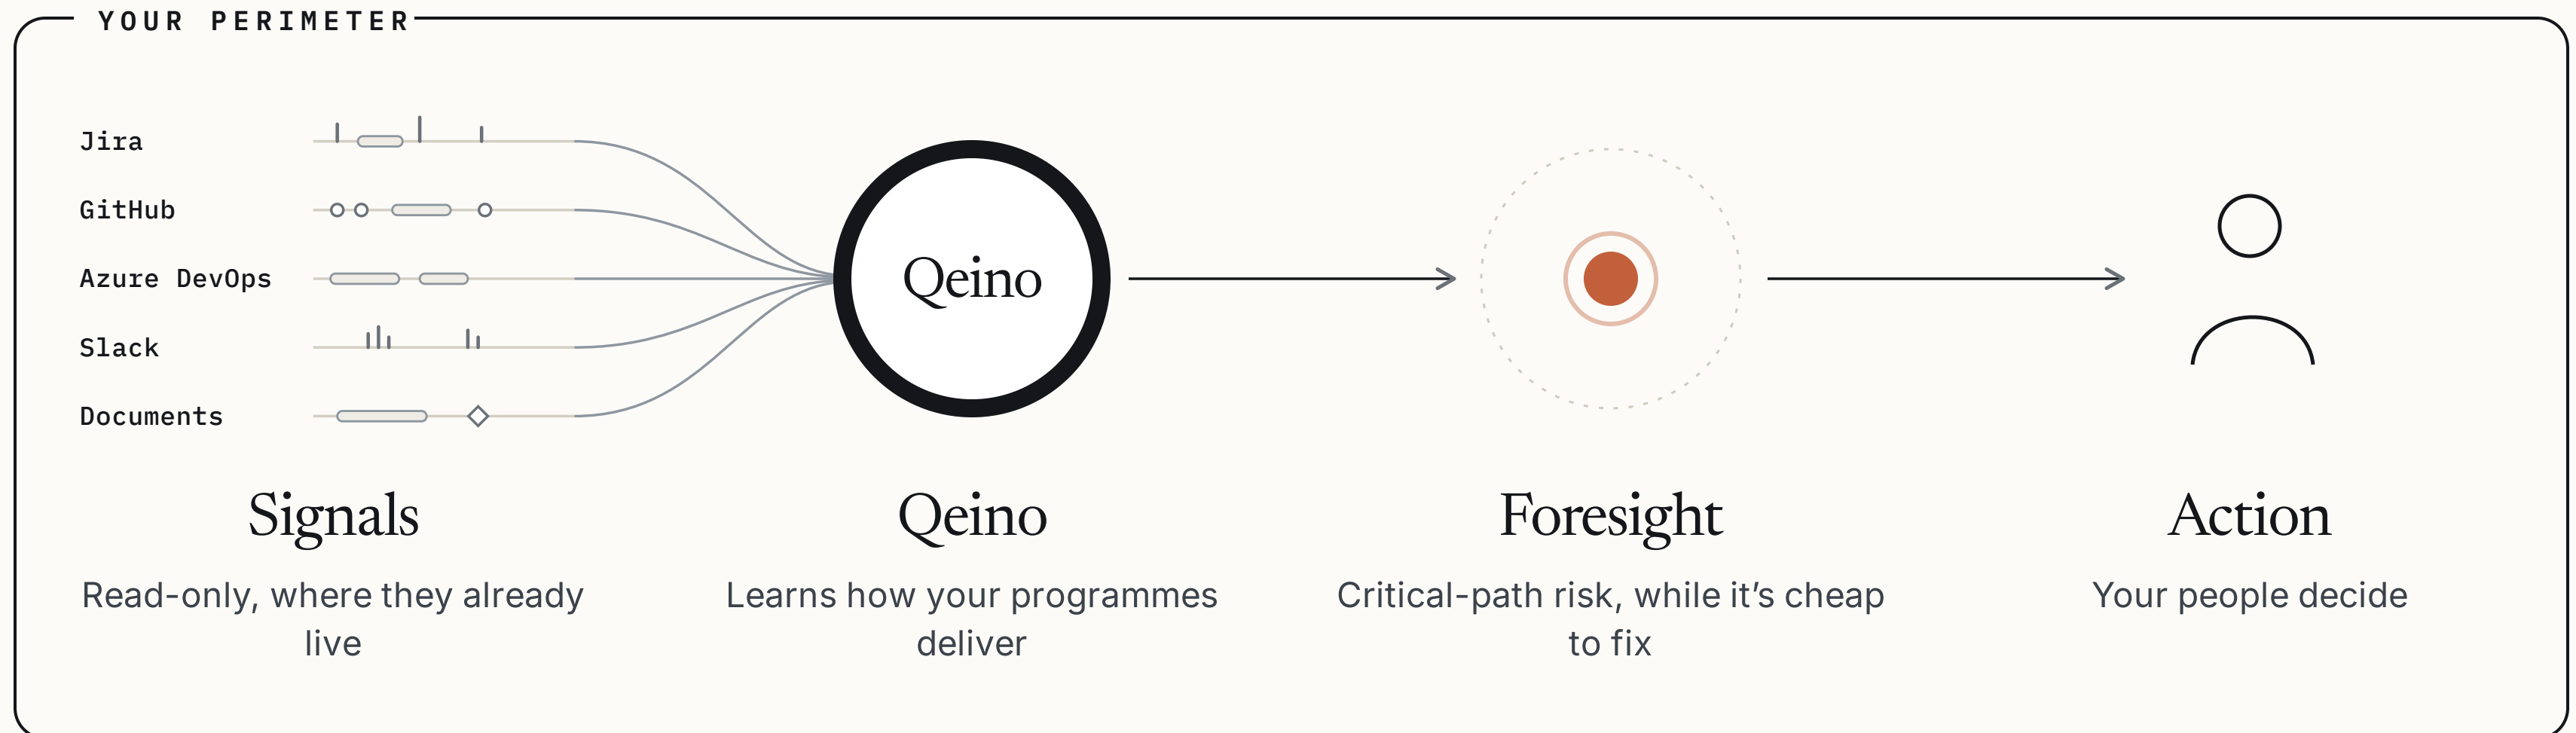

The expensive part isn't the problem. It's finding out late.

The signal was already in the building.

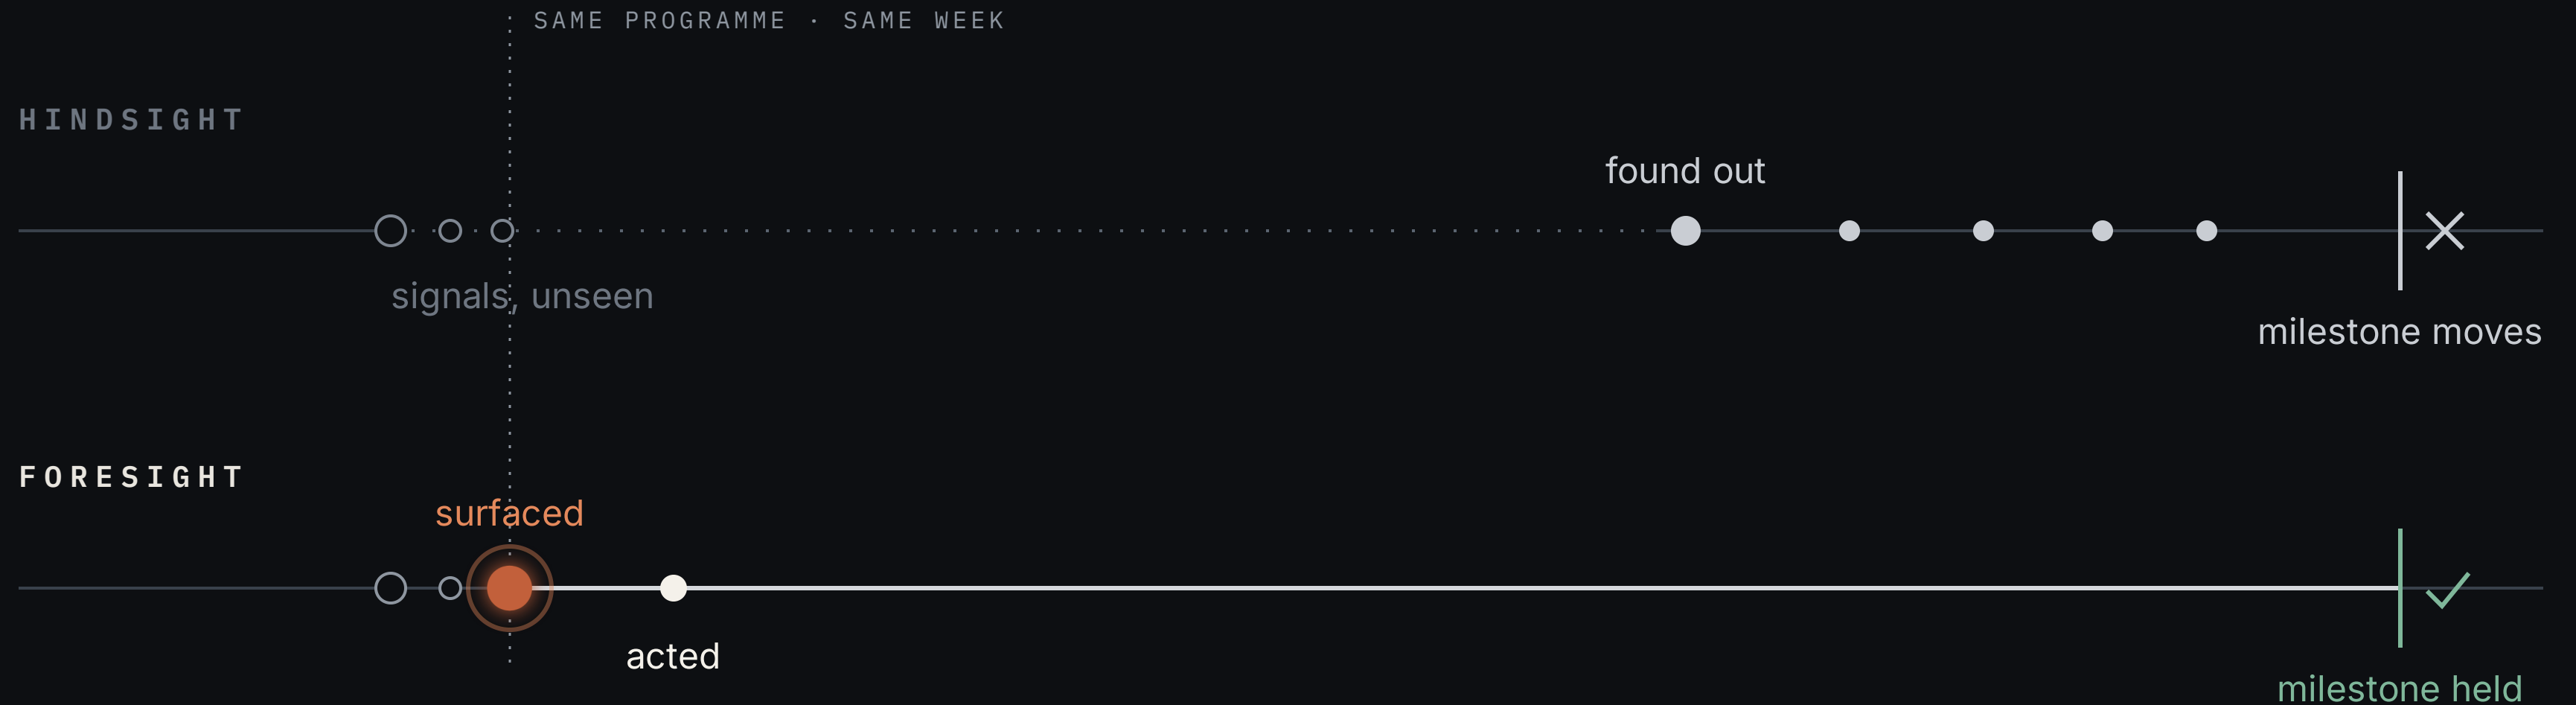

Five systems. None of them wrong. None of them connected.

Qeino connects the signals before the milestone moves.

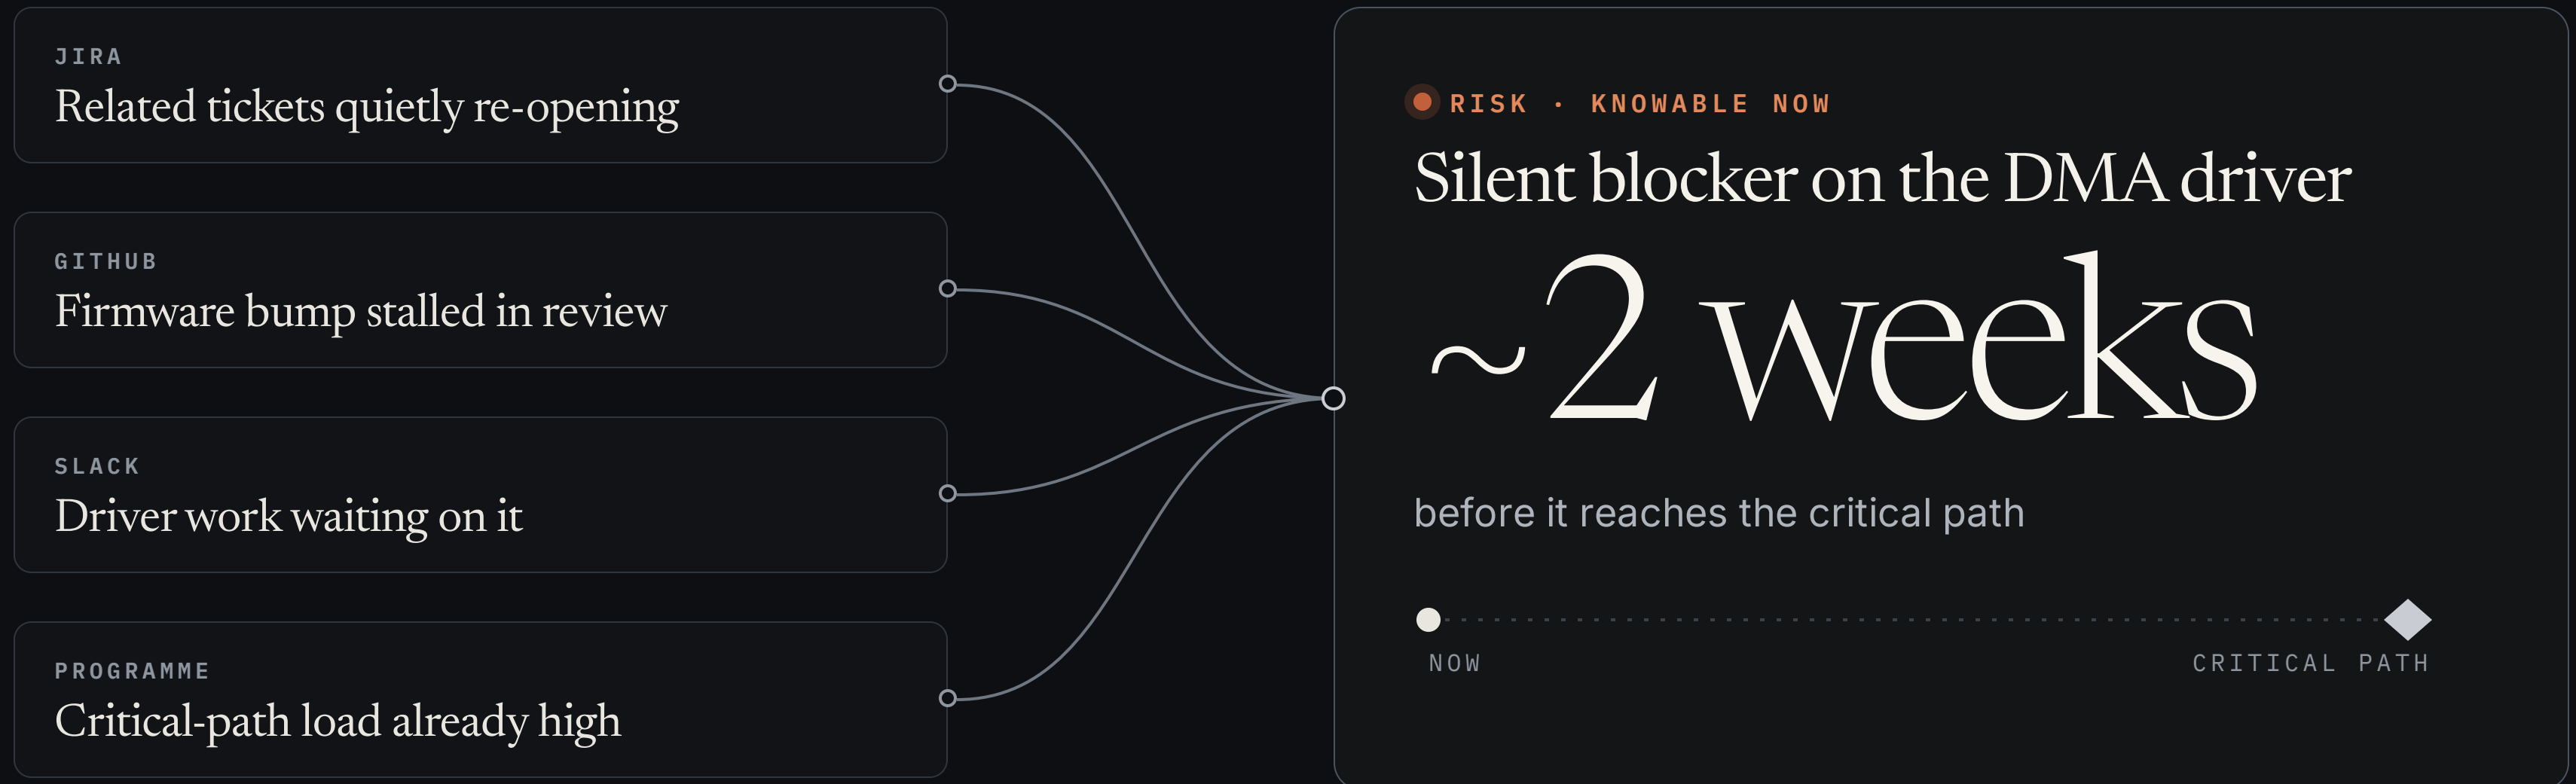

Dashboards tell you what happened. Qeino tells you what is forming.

• ILLUSTRATIVE

Four quiet signals. One critical-path risk.

• ILLUSTRATIVE • SYNTHETIC DATA – NOTHING HERE IS A CUSTOMER RECORD

Measured, not asserted.

• EXAMPLE ENTRY • ILLUSTRATIVE

SIGNAL		ACTION		OUTCOME		● LEDGER
Jira #442 re-opened	→	Review re-routed	→	Unblocked early	→	Recorded, traceable

Measured against your own baseline. No generic benchmark. No invented ROI.

Your engineering IP does not have to leave the building.

Qeino goes to your data. Your data does not have to come to Qeino.

ON-PREMISES	PRIVATE CLOUD
AIR-GAPPED	READ-ONLY

Built the other way round.

Cloud-first

Deployment-first

THE TOOL COMES TO YOUR DATA

Hindsight

Foresight

WHAT IS FORMING, NOT WHAT HAPPENED

Vendor claims

Your evidence

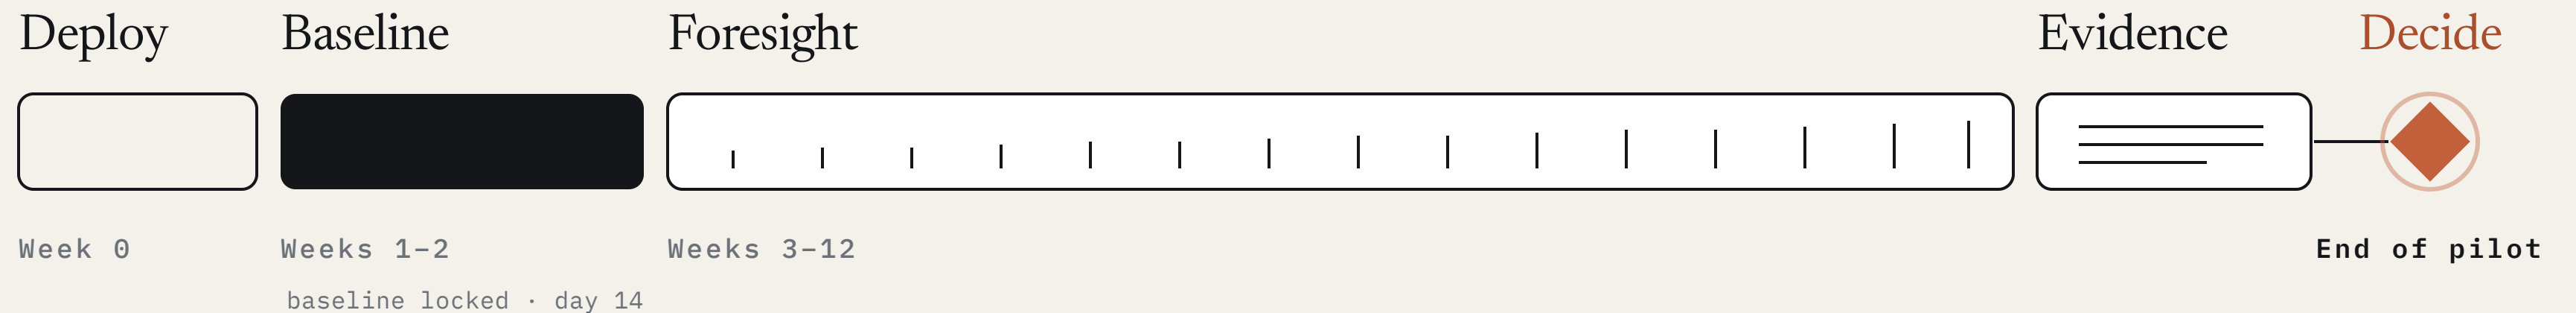

MEASURED IN YOUR OWN DATA

You will recognise the environment.

- ⦿ Several programmes running at once
- ⦿ Multi-disciplined engineering environment
- ⦿ IP that cannot leave the perimeter
- ⦿ Regulated or sovereign obligations
- ⦿ Delays with real commercial consequence

SEMICONDUCTOR & FABLESS · EMBEDDED & IOT · REGULATED MEDTECH · DEFENCE-ADJACENT

One programme. Three months. Measured from day one.

If Qeino doesn't earn its place, you walk away — *with the evidence*.

QUALIFICATION-LED • PRICED PER PROGRAMME, NOT PER ENGINEER

See the risk before the milestone does.

Run a Foresight Pilot.

One programme. Three months. Measured against your own data.
